

Package fixmetodonotes

Joseph Tux

25 avril 2016

A L^AT_EX package to highlight and manage FIXME and TODO annotations.

1 Usage

In the preamble add

```
\usepackage{fixmetodonotes}
```

In the document write notes using

I believe that in the "next year" or "future"? the revolution will not be televised.

FIXME

```
I believe that in the \FIXME{"next year" or "future"?}\
the revolution will not be televised.
```

or

```
TODO add a playful picture
```

```
\TODO{add a playful picture}
```

To show a list of pending notes, together with links to their pages, use

List of notes

1	FIXME : " <u>next year</u> " or " <u>future</u> "?	1
2	TODO : add a playful picture	1
3	CITE : "CITE"	2
4	SUPPRIME : Similarly,	2
5	STYLE : Un exemple	2

```
\listofnotes
```

The list of notes will be shown like a table of content or a list of figures.

2 Creating new kinds of notes

By default, "fixmetodonotes" provides three kinds of notes : "FIXME", "TODO" and **CITE** "CITE".

It is possible to add declare new kinds of notes using the "\defnote" command. Notes can be declared as `_margin_` or `_inline_` notes. It is also possible to specify new ways to mark the text.

To define a new kind of note called "SUPPRIME"¹ that displays a margin note and crosses out the text, use

```
\defnote{SUPPRIME}{margin}{\sout}
```

`\sout` = barrer (du package ulem, met le pseudo-style «barré»)

Similarly, to define a red highlight marker "STYLE" use

STYLE Un exemple pour illustrer le nouveau modèle de note «style».

SUPPRIME

Dans le préambule : `\defnote{STYLE}{inline}{\NOTES@colorline{red}}`

`\STYLE{Un exemple}` pour illustrer le nouveau modèle de note «style».

3 Automatic "DRAFT" watermark

"fixmetodonotes" will add a "DRAFT" watermark to any page that has at least one notes.

Le fichier `fixmetodonotes.sty` est très court. Il est facile de le franciser (le copier `/usr/local/... fixmetodonotes-fr.sty`) et de changer DRAFT en BROUILLON ou EPREUVE ou ...

When all the notes are removed from a page, the watermark will not be produced at all. This means that it is possible to leave "fixmetodonotes" enabled even in final versions of the documents.

Use the "*nowatermark*" option to disable all watermarks.

1. ne supporte pas les accentués. S'en tenir aux capitales ASCII.
